Chemical Physics is published semi-monthly. The 1981 subscription price per volume is Dfl. 185.00 (approx. \$ 74.00) excluding Dfl. 18.00 (approx. \$ 7.00) postage and handling. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.

Subscriptions should be sent to the publisher: NORTH-HOLLAND PUBLISHING COMPANY, P.O. Box 211, Amsterdam, The Netherlands, or to any subscription agent or bookseller.

EDITORIAL

Fifty Volumes of Chemical Physics

This index commemorates the first fifty volumes of Chemical Physics. It is our desire that it not only provides time-saving access to research articles in the various fields of chemical physics, but that it be regarded as a tribute to those who have helped bring Chemical Physics to maturity. Accordingly, we extend our congratulations to past editors, associate editors, to authors, and in particular to the many unheralded referees who continue to make, unselfishly, critical contributions to the journal and to the field of science that it represents.

In looking toward the next fifty volumes we remain devoted to the goal of publishing excellent science with minimum possible delays. We intend to continue to practice the original philosophy of Chemical Physics which is to encourage the publication of both experimental and theoretical research papers in the field: experimental studies being brought into relationship with theory, and theoretical work being brought into relationship with experiments.

We would like to commend North-Holland Publishing Company for its fine work and for continuing to respond to our suggestions for improvement. Furthermore, this is an appropriate moment for us to thank the office staff in Munich and Philadelphia who deserve all the credit for everything that runs smoothly in the Chemical Physics editorial operation. Finally, we thank our institutions Technische Universität München and University of Pennsylvania for understanding the importance of Chemical Physics to scientific education and research.

Group theory and algebras

- The relation between the high temperature and room-temperature structure of CsCuCl_3 ,
C.J. Kroese and W.J.A. Maaskant 5 (1974) 224
- Tables of oriented site symmetries in space groups, J.D.H. Donnay and G. Turrell 6 (1974) 1
- Solution of the rotation-internal rotation problem of glyoxal type molecules by infinite
matrix technique, M. Gut, A. Bauder and Hs.H. Günthard 8 (1975) 252
- On the application of group theory to molecular excitons, J. Hoshen, R. Kopelman and
J. Jortner 10 (1975) 185
- Correlation diagrams for electronic states of H_2O and fragment species, S. Tsurubuchi 10 (1975) 335
- Tables of subgroups, site groups and interchange groups of symmetry points groups and
the construction of SALCs, E. Rytter 12 (1976) 355
- Spin-orbit and vibronic perturbations on the chiroptical spectra of dissymmetric pseudo-
tetragonal metal complexes, G. Hilmes, D. Caliga and F.S. Richardson 13 (1976) 203
- A generalization of concepts pertinent to correlation rules for chemical reactions. Sym-
metry classification of the vibronic states of rearranging molecule, R. Wallace 13 (1976) 349
- Spherical tensor theory of molecular multipole moments and polarizabilities, C.G. Gray
and B.W.N. Lo 14 (1976) 73
- Computed static potentials for AH_n molecules: A scattering-orientated form,
F.A. Gianturco and D.G. Thompson 14 (1976) 111
- On the ligand-field potential for f electrons in the angular overlap model, W. Urland 14 (1976) 393
- Isometric groups and chirality of nonrigid molecules: A generalization of Kelvin's
theorem, H. Frei and Hs.H. Günthard 15 (1976) 155
- Vibrational barrier for resonance π -bond movement in conjugated linear crystals,
Ying-Nan Chiu and F.E. Wang 18 (1976) 301
- Spin-orbit effects in metalphthalocyanines, T.-H. Huang, K.E. Rieckhoff, E.-M. Voigt
and E.R. Menzel 19 (1977) 25
- Heisenberg models on radical reactions: Local spin (magnetic) symmetry conservations of
biradical species, K. Yamaguchi, Y. Yoshioka and T. Fueno 20 (1977) 171
- A different approach to asymmetric-rotor hfs energies, W. Hüttner 23 (1977) 71
- Associate-induced circular dichroism (AICD): a theory of the circular dichroism of
associated or bonded chromophores in the dipole approximation, P.E. Schipper 23 (1977) 159
- Emission spectra of $\text{Cs}_2\text{NaTbCl}_6$ and $\text{Cs}_2\text{NaYCl}_6:\text{Tb}^{3+}$, L.C. Thompson, O.A. Serra,
J.P. Riehl, F.S. Richardson and R.W. Schwartz 26 (1977) 393
- Stark effect and isometric groups of nonrigid molecules. I. General theory and deter-
mination of the relative signs of components of the electric dipole moment of semiri-
gid molecules with one and two symmetric rotors, W. Bossert, J. Ekkers, A. Bauder
and Hs.H. Günthard 27 (1978) 433

- Generalized molecular orbital (GMO) theories of organic reaction mechanisms. Orbital symmetry, orbital stability and orbital pairing rules, K. Yamaguchi 29 (1978) 117
- The effect of the crystal field on ESR parameters of V^{4+} ions, B.N. Misra and R. Kripal 31 (1978) 95
- Spatial correlation of atomic electrons: He^{**} , P. Rehms, M.E. Kellman and R.S. Berry 31 (1978) 239
- Infinite matrix solution of the rotation–internal rotation problem of glyoxal type molecules. II, M. Gut, R. Meyer, A. Bauder and Hs.H. Günthard 31 (1978) 433
- Rovibronic symmetry correlation in molecular combination and dissociation. II. The $O_2 + O_2 \rightleftharpoons O_4(D_{2h})$ system, A. Metropoulos and Y.-N. Chiu 36 (1979) 113
- The assessment of the crystal field parameters for f^n -electron systems by the angular overlap model. Rare-earth ions in $CaWO_4$, W. Urland 38 (1979) 407
- A correlation between Kekulé valence structures and conjugated circuits, I. Gutman and M. Randić 41 (1979) 265
- Simple formulas for rotation averages of spectroscopic intensities, L. Gårding and B. Nordén 41 (1979) 431
- Generalized classification of the rotational–vibrational wavefunctions of C_{3v} and D_{3h} symmetric tops according to their respective molecular point groups, A. Metropoulos and Y.-N. Chiu 42 (1979) 61
- Exchange interaction and orbital degeneracy in the $Cu(II)$ – $Co(II)$ heterobinuclear complex, O. Kahn, P. Tola and H. Coudanne 42 (1979) 355
- Point chirality functions. Symmetry rules for chiral representations in one-centre molecular and field models, P.E. Schipper 44 (1979) 261
- Sum of states, isometric group and symmetry number of nonrigid molecules, H. Hollenstein, A. Bauder and Hs.H. Günthard 47 (1980) 269
- Rotation–vibration symmetry correlation in bimolecular reactions. II. Atom–polyatom systems, A. Metropoulos and Y.-N. Chiu 47 (1980) 359
- Classical mechanics and field theory*
- Reflection spectroscopy of optically active materials, A.J. Einhorn, F.W. Phelps Jr. and Y.-H. Pao 1 (1973) 277
- Semi-classical S matrix theory of reactive and non-reactive atom–molecule collisions, J.M. Bowman and A. Kuppermann 2 (1973) 158
- Reactive scattering of hydrogen and deuterium atoms from halogen molecules, J. Grosser and H. Haberland 2 (1973) 342
- A simple model of chemical reaction: FOTO (forced oscillation of a tightening oscillator), M.D. Pattengill and J.C. Polanyi 3 (1974) 1
- Reflection spectroscopy on monoclinic crystals, E.E. Koch, A. Otto and K.L. Kliever 3 (1974) 362
- Energy transfer in classical collinear and perpendicular central collisions of a structureless atom with a Morse oscillator, M. Faubel and J.P. Toennies 4 (1974) 36
- Analysis of infrared and microwave spectra of cyanamide and cyanamide- d_2 by rotation–inversion theory, A. Attanasio, A. Bauder and Hs.H. Günthard 6 (1974) 373
- Tests of semiclassical treatments of vibrational–translational energy transfer in collinear collisions of helium with hydrogen molecules, J.W. Duff and D.G. Truhlar 9 (1975) 243
- Interpretation of the Stark effect in molecular crystals, D.A. Dunmur and R.W. Munn 11 (1975) 297
- Application of some methods of constrained optimization to the calculation of the molecular strain energy, L. Carballeira, J. Casado and M.A. Rios 12 (1976) 71
- Trajectory studies of energy transfer: CH_3NC with He, Xe, H_2 and N_2 , D.L. Bunker and S.A. Jayich 13 (1976) 129
- Static-lattice theory of crystalline HCN. I. Effective dipole potential, R.W. Munn and R.J. Newham 14 (1976) 309

- On the ligand-field potential for f electrons in the angular overlap model, W. Urland 14 (1976) 393
- Dielectric tensor, effective polarizability and local electric field in pyrene crystals, A.H. Price, J.O. Williams and R.W. Munn 14 (1976) 413
- Separable unimolecular reaction rate theory – A general formulation, S. Nordholm 15 (1976) 59
- Comparison of quantum mechanical and quasi-classical calculations of collinear reaction rate constants for the $\text{H} + \text{Cl}_2$ and $\text{D} + \text{Cl}_2$ systems, H. Essén, G.D. Billing and M. Baer 17 (1976) 443
- Redundant coordinates and Lagrange equations for molecular vibrations, R. Meyer, P. Groner and Hs.H. Günthard 19 (1977) 407
- Some remarks on the semiclassical eigenvalue problem, R.G. Woolley 19 (1977) 455
- Eigenvalue problems of classical Liouville operators, B.C. Eu 20 (1977) 93
- The optical activity of large molecules from classical scattering theory, N.L. Balazs and I. Tobias 20 (1977) 209

- Relationship between one-electron Green's function and quantum chemical theories, F.S.M. Tsui and K.F. Freed 5 (1974) 337
- High resolution spectrum of the xenon molecule in the vacuum ultraviolet region (1150-1300 Å), M.-C. Castex 5 (1974) 448
- Calculation of the NMR relaxation time of dilute ^{129}Xe gas, B. Shizgal 5 (1974) 464
- Theory of two-photon absorption and emission. Second-order saturation effect, O. Kafri and S. Kimel 5 (1974) 488
- The vibrational relaxation of H_2 . I. Experimental measurements of the rate of relaxation by H_2 , He, Ne, Ar and Kr, J.E. Dove and H. Teitelbaum 6 (1974) 431
- A study of the $X\alpha\beta$ -exchange approximation on atoms for use in molecular and solid-state calculations, K. Schwarz 7 (1975) 94

- On Slater's transition state concept for ionization energies, K. Schwarz 7 (1975) 100
- Penning ionization optical spectroscopy: Metastable helium ($\text{He } 2^3\text{S}$) with nitric oxide,
J.A. Coxon, M.A.A. Clyne and D.W. Setser 7 (1975) 255
- Photoexcitation and photodissociation lasers. II. CO laser emission from the vacuum UV
photodissociation of COS, M.C. Lin 7 (1975) 433
- Investigation of the chemical reactions $\text{H} + \text{H}_2$ and $\text{H} + \text{D}_2$ by a hydrogen maser,
E.B. Gordon, B.I. Ivanov, A.P. Perminov, E.S. Medvedev, A.N. Ponomarev and
V.L. Tal'rose 8 (1975) 147
- $\text{NO}(\text{C}^2\Pi - \text{A}^2\Sigma^+)$ emission during the radiative recombination of N and O atoms,
T.W. Dingle, P.A. Freedman, B. Gelernt, W.J. Jones and I.W.M. Smith 8 (1975) 171
- Convergence of the elastic and the inelastic collision cross sections in the coupled-states
and the close-coupling methods, P. McGuire 8 (1975) 231
- Response of an absorber to resonant radiation, J.M. Schurr 8 (1975) 399
- Variation calculation of the NMR spin-spin coupling constant in HD by using a non-
singular contact operator, W. Sanger and J. Voithlander 9 (1975) 183
- Laser induced photodissociation of iodine molecules, Spin-orbit relaxation of $I(^2\text{P}_{1/2})$,
I. Arnold, F.J. Comes and S. Pionteck 9 (1975) 237
- Distribution of reaction products (theory). XI. $\text{H} + \text{F}_2$, J.C. Polanyi, J.L. Schreiber and
J.J. Sloan 9 (1975) 403
- Decay of atomic systems in a strong electric field. Negative ion and hydrogen atom,
N.A. Guschina and V.K. Nikulin 10 (1975) 23
- Coupling of radial and angular correlations in two-electron atoms, N. Moiseyev and
J. Katriel 10 (1975) 67
- Nonadiabatic transitions in chemical reactions: A quantum mechanical study, Z.H. Top
and M. Baer 10 (1975) 95
- Scattering of low energy He^{2+} ions by Ne, Ar, and Kr atoms, T.M. Austin, J.M. Mullen
and T.L. Bailey 10 (1975) 117
- On-the-energy-shell optical potential for $\text{He}-\text{H}_2$ vibrational excitation, J. Lin 10 (1975) 209
- Single path transition probabilities in curve-crossing phenomena. II. Phase shift,
J. Grosser and A.E. de Vries 10 (1975) 229
- Repulsive potentials for the interaction of oxygen atoms with the noble gases and
atmospheric molecules, P.B. Foreman, A.B. Lees and P.K. Rol 12 (1976) 213
- Transition probabilities for coherent multiphoton absorption processes, J. Katriel and
S. Speiser 12 (1976) 291
- Validity of the coupled states approximation for molecular collisions, P. McGuire 13 (1976) 81
- Rotational excitation in the $\text{Ar} + \text{N}_2$ system. A computational study of opacity functions
and differential cross sections by the *P*-helicity decoupling approximation, M. Shapiro
and M. Tamir 13 (1976) 215
- A numerical method for the determination of atom-atom scattering amplitudes from the
measured differential cross sections, R.B. Gerner and M. Shapiro 13 (1976) 227
- Extraction of interaction potentials from the elastic scattering amplitudes: An accurate
quantum mechanical procedure, M. Shapiro and R.B. Gerber 13 (1976) 235
- Empirical regularities of atomic ionization potentials, H. Sambe and R.H. Felton 13 (1976) 299
- Response function theory of electron correlation, F.S.M. Tsui and K.F. Freed 14 (1976) 27
- An ab initio effective potential for two particles in the field of the core: A reduction of
(*N* + 2)-electron problem to two-electron problem, S.W. Wang, H.S. Taylor and
R. Yaris 14 (1976) 53
- Semiclassical calculation of charge transfer: Tunneling at large angular momentum,
E.E. Nikitin, M.Ya. Ovchinnikova, B. Andresen and A.E. de Vries 14 (1976) 121

- The deactivation of $\text{HBr}(v=1)$ by $\text{Br}(^2\text{P}_{3/2})$ atoms, Z. Karny and B. Katz 14 (1976) 295
- Hyperfine relaxation and frequency shift of the $(1,0) \rightarrow (0,0)$ transition due to atomic-molecular collisions, E.S. Medvedev and V.R. Rodman 15 (1976) 77
- Potential energy curve of $^1\Sigma^+ \text{Li}^+/\text{He}$, P.C. Hariharan and V. Staemmler 15 (1976) 409
- Relative coordinate representation for long-range interactions, T. Koga and H. Nakatsuji 16 (1976) 189
- Production of electronically excited iodine atoms $\text{I}(5p^5\ ^2\text{P}_{1/2})$ by collision release in molecular I_2 , D.H. Burde and R.A. McFarlane 16 (1976) 295
- Dynamic multipole polarizabilities of H_2 and He and long-range interaction coefficients for $\text{H}_2\text{-H}_2$, $\text{H}_2\text{-He}$ and He-He , W. Meyer 17 (1976) 27
- Ab initio calculation of the potential energy surface of the system Li^+/CO , V. Staemmler 17 (1976) 187
- Direct determination of ion-neutral molecule interaction potentials from gaseous ion mobility measurements, L.A. Viehland, M.M. Harrington and E.A. Mason 17 (1976) 433
- Intermolecular forces in simple systems, R. Ahlrichs, R. Penco and G. Scoles 19 (1977) 119
- DWBA evaluation of relaxation and kinetic theory of cross sections, W.-K. Liu and F.R. McCourt 19 (1977) 137
- Reaction probability and energy transfer in collisions of sodium atoms with sodium dimmers, A. Gelb and J.S. Alper 19 (1977) 387
- Eigenvalue problems of classical Liouville operators, B.C. Eu 20 (1977) 93
- Differential scattering cross sections for collisions of alkali ions and atoms. I. Homonuclear systems, R.W. Wijnaendts van Resandt, R.L. Champion and J. Los 20 (1977) 107
- The dynamics of CO production from the $\text{O}(^3\text{P}) + \text{methylacetylene}$ reaction, M.E. Umstead, R.G. Shortridge and M.C. Lin 20 (1977) 271
- "Single collision" chemiluminescent studies of the La-OCS reaction - vibrational analysis of the $\text{LaS } \text{C}^2\Pi\text{-X}^2\Sigma^+$ system and determination of $D_0^0(\text{LaS})$, R.W. Jones and J.L. Gole 20 (1977) 311
- Intermolecular potentials obtained from high-energy alkali scattering, C.J. Malerich, K.B. Provodator and R.J. Gross Jr. 20 (1977) 409
- The theory of intramultiplet transitions induced in some heavy atoms by collision with H_2 , HD and D_2 , N.P.D. French and K.P. Lawley 22 (1977) 105
- Vibrational energy consumption in endoergic reactions, E. Pollak 22 (1977) 151
- Dynamical studies of a helium plasma at various pulse repetition rates, D.T.-c Wu, Wm.B. Peatman and J.P. Barach 22 (1977) 307
- Relaxation of the lower vibrational states of $\text{NO}(\text{X}^2\Pi)$ in collisions with NO and Ar, K. Glänzer 22 (1977) 367
- A wavefunction approach to equations of motion-Green's function methods, K.F. Freed and D.L. Yeager 22 (1977) 401
- Analysis of third order contributions to equations of motion-Green's function excitation energies: application to N_2 , D.L. Yeager and K.F. Freed 22 (1977) 41

FERROMAGNETIC MATERIALS

A Handbook on the Properties of Magnetically Ordered Substances

edited by **E. P. WOHLFARTH**, *Department of Mathematics, Imperial College of Science and Technology, London, England*

This publication is meant to serve as a work of reference as well as a textbook and aims to encompass the achievements both of earlier compilations of tables and of earlier monographs. It will eventually consist of 4 volumes; the first 2 volumes are already published.

The articles (about 32 in total are planned) are written by leading authorities active in research and development. Each article concentrates on a description of material properties in graphical and tabular form, discussed in a broad background of the physics, chemistry, metallurgy, structure, and, to a lesser extent, engineering aspects of these properties.

This impressive work is intended to replace the classical and monumental work on Ferro-magnetism by *Bozorth*, published some 30 years ago. As such, it will be of great value to industrial researchers and technologists. University departments of Pure and Applied Physics, Chemistry, Metallurgy, and Electrical Engineering will also welcome the publication of this Handbook.

A COMMENT FROM THE PRESS:

"This handbook is the most comprehensive work to date on the subject of ferromagnetic materials."

Membranes and Intercellular Communication

Proceedings of Les Houches Summer School, Session XXXIII,
30 July - 31 August, 1979.

edited by ROGER BALIAN, *Centre d'Etudes Nucleaires de Saclay, Gif-sur-Yvette*, MARC CHABRE, *Laboratoire de Biophysique Moléculaire et Cellulaire, DRF-CENG, Grenoble*, and PHILIPPE DEVAUX, *Institut de Biologie Physico Chimique, Paris, France*.

1980 xxxii + 658 pages. Price: US \$122.00/Dfl. 250.00. ISBN 0-444-85469-X
Subscription Price: US \$103.50/Dfl. 212.50

This book is the result of an intensive 5 weeks session of the Les Houches Summer School, covering the complete topic of biological membranes and their involvement in cell communication.

It begins with the basic structural and dynamic properties of the main constituent macromolecules: lipides, hydrophobic proteins and glycoconjugates. Their assemblies in model systems and cell membranes are discussed in terms of molecular structure and physicochemical interaction with some emphasis on the biophysical techniques. The latest developments in studies of cell membrane dynamics are particularly stressed. Electrical properties, channels and ionophores in artificial membranes are also discussed.

In the second part, the main cellular communication systems are presented on specific examples. These include axonal and synaptic transmission, transduction of peptide hormone signals and basic immunological recognition problems. These fields are usually studied separately by different specialists, so their correlated presentation is particularly interesting. Each lecture is illustrated by selected examples including the most recent results.

This book will be of interest to biologists involved in one of the domains treated who wish to broaden their knowledge to related domains and to study more fundamental aspects. It will also interest physicists or chemists wishing to orient towards this type of biological problem, who already possess a basic knowledge of molecular biology and biochemistry.

CONTENTS: Courses: The Cell Membrane (S. J. Singer). Physical Properties of Model Membranes and Biological Membranes (J. Seelig). Glycoproteins in Membranes (N. Sharon). Internal Dynamics of Proteins (M. Karplus). Membrane Protein Structure (R. Henderson). Lateral Molecular Motion in Membranes: Immune Recognition and Response (H. M. McConnell). Basic Elements of Immunology (M. Fougereau). T Lymphocytes in Immunity (J. F. A. P. Miller). Transduction of Hormonal Signals Through the Membrane: Kinetic Analysis Role of Hormone Receptors and GTP-Regulatory Proteins in Membrane Transduction (M. Rodbell). Ion Transport Through Lipid Bilayer Membranes (P. Lauger). The Excitable Membrane of Nerve Fibres (C. Bergman and H. Meves). Ionic Permeability Changes Produced by Synaptic Transmitters (P. Ascher). Genetic and "Epigenetic" Factors Regulating Synapse Formation in Mouse Cerebellum and Developing Neuromuscular Junction (J.-P. Changeaux). **Seminars:** Lipid Polymorphism and the Occurrence of Non-Bilayer Phases in Model and Biological Membranes (B. de Kruijff, A. J. Verkleij, J. Leunissen-Bijvelt, C. J. A. van Echteld, W. J. Geritsen, C. Mombers, P. C. Noordam, J. de Gier and P. R. Cullis). Solubility of Intrinsic Membrane Proteins in Phospholipid Bilayers (P. F. Devaux). Application of NMR to the Structural Elucidation of Complex Carbohydrates (L. Dorland and J. F. G. Vliegenthart). Dynamic Aspects of the Structure of Globular Proteins by High Resolution NMR Spectroscopy (A. Cavé and J. Parello). Structural Study of an Intrinsic Protein in a Fluid Membrane: Rhodopsin (M. Chabre). Roles of Cyclic Nucleotides in Synaptic Transmission (J. Bockaert). Conformation Biological Activity Relationship in the Series of Angiotensin II (S. Fermandjian). Cell Surface Domain Formation and Cell Communication (E. L. Benedetti and I. Dunia). Surface Charges on Biological Membranes (B. Neumcke). The Cation Pumps in Nerve and Muscle Cells (Y. Dupont). From Function to Structure: The Cholinergic Receptor in Vitro (J.-L. Popot).

Customers subscribing to the **Les Houches** series are entitled to a **15% discount** on the list price.

INFORMATION TO AUTHORS

Papers in all areas of Chemical Physics are welcomed, but referees will be asked to judge whether experimental papers have been brought into sufficient relation with theory, and whether theoretical papers bear on experimental verification or exhibit progress in experimental developments to this end.

Contributions written in clear English should be sent *in triplicate* to one of the editors. Contributions may also be submitted to a member of the Advisory Editorial Board who is familiar with the research, in which case *two copies plus the original figures* should be sent simultaneously to one of the editors. In any event, all manuscripts will be refereed at the discretion of the editors.

Authors from the Americas, the Far East and Australia should submit their papers to the American editor; those from Europe, the Near and Middle East and Africa should deal with the European editor.

Manuscripts submitted should be first copies (or clear Xerox copies thereof) typed with double spacing and wide margins; all pages should be numbered, and the text arranged into paragraphs. Before mailing the manuscripts, please check the following points:

1. **Title:** The title should be chosen for its sufficient information content such that it conveys to the informed reader the particular nature of the contents he can expect from the paper. When the length exceeds 45 letters, an abbreviated running title should be indicated.
2. **Abstract:** The abstract of 100–150 words should contain all the substance of the methods and the results achieved as well as keywords of the paper.
3. **Address:** The name(s) of the author(s) and the name and address of the institute, where the research work was done should be indicated on the manuscript. Proofs will be sent by the publisher to this address, unless specifically requested otherwise.
4. **Figures:** The drawings for the figures must be submitted on separate sheets, drawn in black Indian ink in large size and carefully lettered (with the use of stencils). The lettering as well as the details should have proportionate dimensions so as not to become illegible or unclear after the usual reduction by the printers; in general the figures should be designed for a reduction factor of two to three. Each figure should have a number and a caption; the captions should be collected on a separate sheet. The appropriate place of a figure should be indicated in the margin. Your figure material will be returned after publication of the article.
5. **Formulae:** Displayed formulae should be numbered and typed or clearly written by hand. Vectors will be printed in bold-face italics (heavy, slanting type), and should be indicated by a wavy underlining in the type-script.
Special attention should be paid to characters that can easily be misread, such as i (lower case), I (cap.), l (el), 1 (one), ' (prime), o (lower case), O (cap.), 0 (zero), ° (degree), u, v (vee), ν (Greek nu), V (cap.) x, X, z, Z, p, P, ρ (Greek rho), etc.
6. **Tables:** Tables should be typed on separate sheets. Each table should have a number and a title. The appropriate places for the insertion of the tables should be indicated in the margin.
7. **References:** In the text, reference to other parts of the paper should be made by section (or equation) number, not by page number. References to other papers should be consecutively numbered in the text and should be listed by number, preferably as in the following examples:
For a book: A. Messiah, *Quantum mechanics*, Vol. 1 (North-Holland, Amsterdam, 1970).
For a paper in a journal: C.J. Winscom and A.H. Maki, *Chem. Phys. Letters* 12 (1971) 264.
For a paper in a contributed volume: A. Carrington, in: *Magnetic resonance and radiofrequency spectroscopy*, ed. P. Averbuch (North-Holland, Amsterdam, 1968) p. 23.
For an unpublished paper: G.J. Lycett, Ph.D. Thesis, University of Birmingham, England (1970).
8. **Footnotes:** As far as possible, footnotes should be avoided.

Upon acceptance of an article, author(s) resident in the USA will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information under the US Copyright Law.

Superionic Solids

Principles and Applications

by SURESH CHANDRA, *Banaras Hindu University, Varanasi, India*

1981 xiv + 388 pages Price: US \$78.00/Dfl. 160.00 ISBN 0-444-86039-8

Superionic Solids (or Solid Electrolytes) are recently discovered materials which have a high level of ionic conduction. This book presents a comprehensive overview of the subject, intelligible to new researchers and useful to specialists. An extensive list of superionic materials and their properties is given, and special structural and theoretical principles responsible for high ionic conduction are discussed.

This work has been written in such a style as to make it self-reading for those with an introductory knowledge of solid state physics. The first chapter provides a general introduction to ionic solids from a structural point of view, while chapter 2 presents a summary of superionic materials developed so far. Their electrical conductivity and structure which makes them a special group of ionic solids are also discussed. The third chapter summarizes important experimental methods used for studying superionic solids. In materials characterization, some techniques are more important than others for each specialized group of solids.

Chapter 4 explains the possible mechanisms of ion transport in "point-defect type superionic solids" while chapter 5 deals with superionic solids having a 'liquid-like sublattice'. Finally, chapter 6 summarizes various applications of superionic solids.

This publication will be of particular value to faculty and research scholars in university departments such as physics, chemistry, electrochemistry, materials science and metallurgy. Scientists concerned with materials groups of research laboratories and directors or chiefs of groups within the batteries industry will also find it to be a worthwhile addition to their bookshelves.

CONTENTS: Preface. *Chapters:* 1. Introduction. 2. Superionic Materials and Structures. 3. Experimental Probes. 4. Ion Transport in 'Point-Defect Type' Ionic and Superionic Solids. 5. Ion Transport in 'Molten-Sublattice-Type' Superionic Solids. 6. Applications of Superionic Solids. References.

Scope:

This interdisciplinary journal is devoted to physics, chemistry and materials science of ion transport phenomena in solids and properties resulting from ion mobility. The major part of each issue contains papers on such topics as physics and chemistry of defects; ionic transport measurements and mechanisms; theories of ion transport; incorporation of ions into electronic conductors; many aspects of solid state electro-chemistry/physics including interfacial properties; processes such as corrosion oxidation, sintering and other solid state reactions. Related technological applications such as batteries, fuel cells, electrochromic displays, solid state chemical sensors, hydrogen storage materials, catalysis, photography, electrolysis cells, metal winning, etc., are also included, provided that the performance characteristics are interpreted in terms of the relevant ionic transport processes. Review papers and relevant symposium proceedings are welcomed.
